

About Mesh Studio

Mesh Studio

What We Do

Mesh Studio is a cloud software consultancy that specializes in helping customers ship cloud technology products faster.

We are a full-service team comprised of experienced, dedicated and focused software engineers. Our company has a genuine interest in building high-quality technology and we enjoy helping our customers bring their products, and services to life.

Mesh doesn't just write software, we partner with our customers to understand the underlying business objectives that necessitate software development. We then design, architect and implement cloud software systems that help our customers meet those objectives.

We specialize in all facets of cloud software including architecture design, application development, hosting infrastructure, developer operations (DevOps), and serverless computing. Mesh Studio is an official AWS partner and has worked with companies like [Staples](#), [August](#), and [Symetra](#).

History

Mesh founders, [Kevin Coleman](#) and [Taylor Halliday](#), moved to San Francisco in 2014 to work for different venture-funded startups. Kevin built messaging software for [Layer](#) while Taylor built the future of private transportation for [Chariot](#).

During their nights and weekends in the winter of 2015, the pair started working on a customer success product called [Mesh Data](#). That product would eventually land them a spot in the prestigious [YCombinator](#) accelerator.

While participating in the accelerator, Kevin and Taylor came to realize that the market for customer success products was already fairly saturated. The real problem for companies, however, was that they were having difficulty knitting these platforms together with their own cloud systems. Kevin and Taylor realized that there was a massive shortage of

sophisticated cloud engineers who could help companies integrate these services into a cohesive whole.

As a result, they decided to focus on building a consultancy that would help customers build applications, services, and integrations in the cloud.

Executives

Taylor Halliday, Founding Partner

Before Mesh, Taylor ran mobile development for Chariot Transit, a transit startup based in San Francisco. As the first engineering hire, Taylor was responsible for building all of Chariot's mobile applications, including the customer iOS and Android apps, as well as the driver iPad application. Chariot was acquired in June 2016 by Ford Motor Company.

Before Taylor's work at Chariot, he was a lead engineer at a Seattle based product studio called 5Celsius. While at 5Celsius, Taylor worked on several full-stack applications, including Dave, an early on-demand delivery service for Cannabis.

Taylor lives in the Madison Park neighborhood with his wife Chelsea and his 18-month-old son Mason. Outside of Mesh, Taylor enjoys soaking up all that the northwest has to offer, and diving into new and interesting programming topics.

Kevin Coleman, Founding Partner

Before Mesh, Kevin worked on the iOS team at Layer, the leading messaging API. Kevin was responsible for building several developer products including the LayerKit messaging SDK and the Atlas open source UI framework.

Before Layer, Kevin worked at Rhapsody as a product manager on the Rhapsody developer platform. He was responsible for launching several developer-facing products including the Rhapsody REST API, and SDKs for iOS and Android.

Kevin lives in Seattle with his wife Lindsey and their dog Kameron. Outside of Mesh, Kevin is an avid saltwater fly fisherman and can be found exploring the local beaches of Puget sound in pursuit of Sea-run Cutthroat Trout
